

Faculty of Science
Structural Equation subject

*The application of SEM in the
analysis of financial well-being in
the US*

Supervisor: Prof. Bart Meuleman
Co-supervisor: Alberto Stefanelli

Author: Phuong Dang

KU Leuven, May 2022

Contents

1	Introduction	1
2	Data descriptive	1
2.1	Variables and Indicator variables	1
2.2	Latent factors	1
3	Methods and Hypotheses	2
3.1	Structural Equation Modeling	2
3.2	Confirmatory Factor Analysis framework	3
3.2.1	The goodness of fit	3
3.2.2	Validity and Reliability	3
3.3	Measurement Invariance theory	4
3.4	Mediation effect	4
4	Modeling Analysis	5
4.1	Confirmatory Factor Analysis	5
4.1.1	Data descriptive	5
4.1.2	Building CFA model	5
4.1.3	Composite reliability	7
4.2	Measurement Invariance	7
4.3	Multi Indicators Multi Causes - MIMIC	8
4.4	Mediation Analysis	9
4.5	Structural Equation Modeling in the multiple group analysis	9
5	Conclusion	10
6	Limitation and further research	10
7	Appendixes	12
7.1	Appendix A: Selected Variables	12
7.2	Appendix B: Data descriptive	13
7.3	Appendix C: Baseline model	14
7.4	Appendix D: CFA model	15
7.5	Appendix E: MIMIC analysis	16
7.6	Appendix F: Mediation analysis	17
7.7	Appendix G: SEM model in the multiple group analysis	18
